

ABSTRACT OF THE DISCLOSURE

The invention relates to wear level indicating
filaments and the fabrics made thereof. Disclosed
are filaments with multiple layers surrounding a core
5 yarn, where the core and layers are distinguishable
from one another so as to indicate fabric wear. Also
disclosed are conductive monofilaments used to detect
fabric wear, multilayer filaments used to create a
guideline on a fabric, and a conductive monofilament
10 that also has a contrasting color used to form a
fabric guideline.
